METHOD OF ANALYSIS: The cubic equations to be solved is  $x^3 + px^2 + qx + r = 0$  (1) Where  $p, q, r$  are non-zero numbers. Multiplying both sides of (1) by  $(x - p)$ ,  $p \neq 0$  we have  $x^4 + 2px^3 + (p^2 - q)x^2 + (pq - r)x - pr = 0$  (2) Assuming the LHS of equation (2) can be expressed as the product of two quadratic factors in  $x$ . Sat, 10 Nov 2018 18:12:00 GMT The Theory Of Equations Vol I - Internet Archive - In algebra, the theory of equations is the study of algebraic equations (also called "polynomial equations"), which are equations defined by a polynomial. The main problem of the theory of equations was to know when an algebraic equation has an algebraic solution. Theory of equations - Wikipedia - J.V.
